

Topic: Analytic Geometry

Days: 9

Subject(s):

Grade(s):

Key Learning:

The graphs of conic sections are represented by secondary degree equations.

Unit Essential Question(s):

How can we identify the "critical" components of the graph of a conic section from its equation?

How can we find the equation of a conic section from the "critical" components of its graph?

|  |   |   |
|--|---|---|
| <p>Concept:<br/><b>Review of the basics of analytic geometry</b><br/>CC.2.3.HSA.10</p> | <p>Concept:<br/><b>Circles</b><br/>CC.2.3.HSA.8</p> | <p>Concept:<br/><b>Ellipses</b><br/>CC.2.3.HSA.10</p> |
|--|---|---|

|  |  |   |
|--|--|---|
| <p>Lesson Essential Question(s):<br/>What is analytic geometry? What are conic sections? (A)</p> | <p>Lesson Essential Question(s):<br/>What is the center and radius of a circle whose equation is (A)</p> | <p>Lesson Essential Question(s):<br/>What is the equation of the ellipse with major vertices (8,-2) and (2, -2), and foci (5+ (A)</p> |
|--|--|---|

|  |                                       |  |
|--|---------------------------------------|--|
| <p>Vocabulary:<br/>analytic geometry, locus, complete the square</p> | <p>Vocabulary:<br/>center, radius</p> | <p>Vocabulary:<br/>ellipse, foci, major axis, vertices</p> |
|--|---------------------------------------|--|

|   |  |
|---|--|
| <p>Concept:<br/><b>Hyperbolas</b><br/>CC.2.3.HSA.10</p> | <p>Concept:<br/><b>Parabolas</b><br/>CC.2.3.HSA.10</p> |
|---|--|

|   |  |
|---|--|
| <p>Lesson Essential Question(s):<br/>What are the center, foci, vertices, and equations of the asymptotes of the hyperbole: (A)</p> | <p>Lesson Essential Question(s):<br/>What is the equation of a parabola with vertex (2,2) and directrix <math>y=17/8</math>? (A)</p> |
|---|--|

|                    |  |
|--------------------|--|
| <p>Vocabulary:</p> | <p>Vocabulary:<br/>parabola, areas of symmetry, focus, vertex, directrix</p> |
|--------------------|--|

Topic: Data Analysis and Probability

Days: 8

Subject(s):

Grade(s):

**Key Learning:**

Data can be described by a variety of statistical means, depending on its context.

Probability and probability distributions are used to make inferences about a set of data.

**Unit Essential Question(s):**

How are sets of one-variable and two-variable data organized, summarized, presented and analyzed?

What probability measures are calculated and how do those measures allow us to make inferences from a data set?

|   |  |   |
|---|--|---|
| <p><b>Concept:</b><br/>Counting Principle and Permutations and Combinations</p> <p><u>CC.2.4.HS.B.6</u></p> | <p><b>Concept:</b><br/>Basic Probability, Compound Probability, Conditional Probability, Odds</p> <p><u>CC.2.4.HS.B.6</u> <u>CC.2.4.HS.B.7</u></p> | <p><b>Concept:</b><br/>Binomial Probability</p> <p><u>CC.2.4.HS.B.7</u></p> |
|---|--|---|

|   |   |  |
|---|---|--|
| <p><b>Lesson Essential Question(s):</b><br/>How are permutations different than combinations? (E,T)</p> | <p><b>Lesson Essential Question(s):</b><br/>What are the similarities/differences between independent/dependent events inclusive/mutually exclusive? How is conditional probability related to the probability of two independent events? (A)</p> | <p><b>Lesson Essential Question(s):</b><br/>What conditions must be in effect for a binomial probability experiment? (A)</p> |
|---|---|--|

|  |   |   |
|--|---|---|
| <p><b>Vocabulary:</b><br/>Permutation, Combination, Sample space</p> | <p><b>Vocabulary:</b><br/>Inclusive, Mutually exclusive, Dependent, Independent</p> | <p><b>Vocabulary:</b><br/>Success, Failure, Experimental Probability, Theoretical Probability</p> |
|--|---|---|

Topic: Data Analysis and Probability

Days: 8

Subject(s):

Grade(s):

|   |   |  |
|---|---|--|
| <p>Concept:<br/><b>Descriptive Statistics</b><br/>CC.2.4.HS.B.1</p>   | <p>Concept:<br/><b>Inferential Statistics</b><br/>CC.2.4.HS.B.2, CC.2.4.HS.B.3</p>                          | <p>Concept:<br/><b>Probability Distribution</b><br/>CC.2.4.HS.B.2, CC.2.4.HS.B.3</p>   |
| ↓   | ↓   | ↓  |
| <p>Lesson Essential Question(s):<br/>Under what conditions would the measures of central tendency be greatly impacted by the measures of variance? (ET)</p>                                   | <p>Lesson Essential Question(s):<br/>For a set of given data, how are confidence levels determined? (A)</p> | <p>Lesson Essential Question(s):<br/>For a set of normally distributed data, how do the mean, the median, and the mode compare? (ET)</p> |
| ↓   | ↓   | ↓  |
| <p>Vocabulary:<br/>Box plot, Frequency distributions, Histogram, Stem and leaf plot, Range, IQR, Measures of central tendency, Standard deviation, Quartile, Outlier, Regression equation</p> | <p>Vocabulary:<br/>Levels of confidence, Standard error of the mean</p>                                     | <p>Vocabulary:<br/>Normal curve, T-scores, Normal distribution, Standard deviation</p>   |

|                         |

Topic: Exponential & Logisitcs Functions

Days: 6

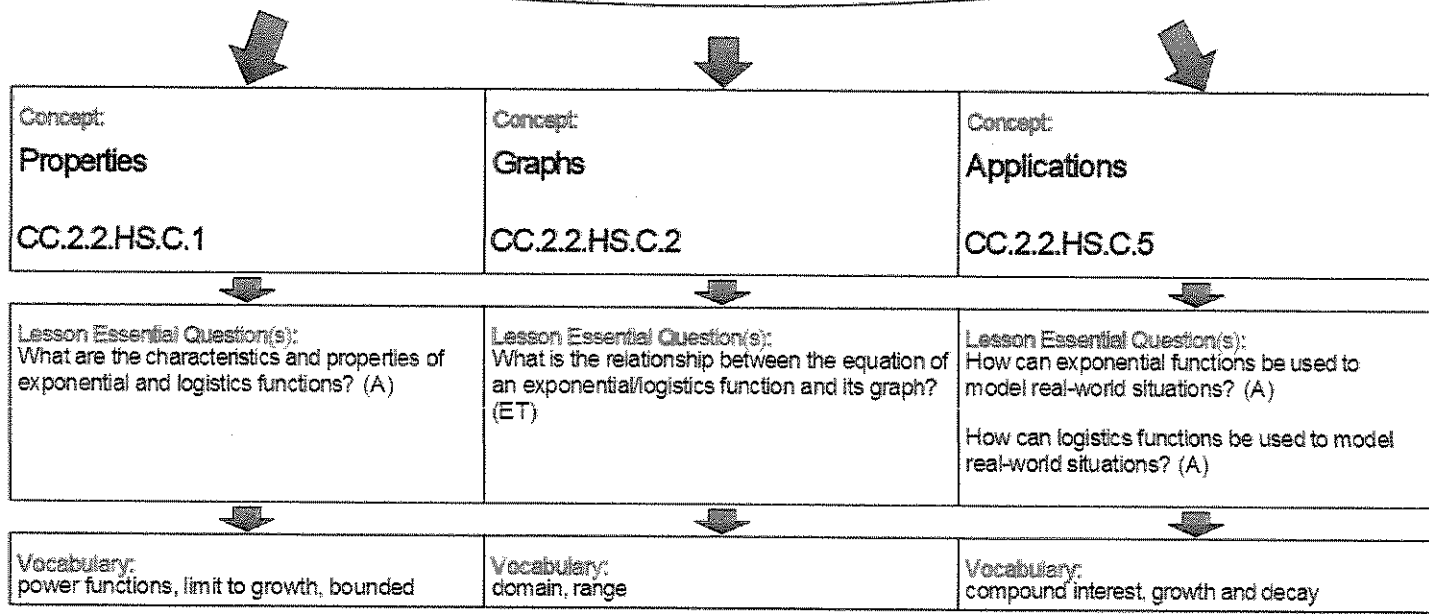

Subject(s): Math

Grade(s): 11th, 12th

**Key Learning:** Exponential and logistics functions are particularly useful in modeling growth and decay.

**Unit Essential Question(s):** What are the characteristics of exponential and logistics functions that make them useful as models of growth and decay?

Curriculum: COLUMBIA BOROUGH SD Curriculum

PENNSYLVANIA

Course: PreCalculus with Trigonometry

Date: March 14, 2013 ET

Topic: Exponential &amp; Logisitcs Functions

Days: 6

Subject(s): Math

Grade(s): 11th, 12th

Concept:

**Zeros & Roots****CC.2.2.HS.C.5**

Lesson Essential Question(s):

How can exponential functions be used to model real-world situations? (A)

How do we locate the roots of an exponential/logisticsistics function? (A)

How do we locate the roots of an exponential/logisticsistics function? (ET)

How can logistics functions be used to model real-world situations? (A)

What is the significance of the roots of an exponential/logistics function? (A)

What is the relationship between the equation of an exponential/logistics function and its graph? (ET)

What is the significance of the roots of an exponential/logistics function? (ET)

Vocabulary:

Topic: Functions & Their Properties

Days: 8

Subject(s): Math

Grade(s): 11th, 12th

**Key Learning:** All functions have several key properties.

**Unit Essential Question(s):**  
**What methods can be used to analyze the characteristics of a function?**

|  |   |  |
|--|---|--|
| <p><b>Concept:</b><br/> <b>Identify functions</b></p> <p><b>CC.2.2.HS.C.1</b><br/> <small>CC.2.2.HS.D.4</small><br/>                 CC.2.2.HS.C.1</p> | <p><b>Concept:</b><br/> <b>Domain &amp; Range (boundedness)</b></p> <p><b>CC.2.2.HS.C.1</b><br/> <small>CC.2.2.HS.C.1</small></p> | <p><b>Concept:</b><br/> <b>Discontinuity, Asymptotes, End-behavior</b></p> <p><b>CC.2.2.HS.C.4</b><br/> <b>CC.2.2.HS.C.5</b></p> <p><small>CC.2.2.HS.D.4</small><br/>                 CC.2.2.HS.C.4<br/>                 CC.2.2.HS.C.5</p> |
|--|---|--|

|   |  |   |
|---|--|---|
| <p><b>Lesson Essential Question(s):</b><br/>                 What makes a relationship a function? (ET)</p> | <p><b>Lesson Essential Question(s):</b><br/>                 How do we determine and describe the domain and range of a relation? (ET)</p> | <p><b>Lesson Essential Question(s):</b><br/>                 How do restrictions affect the graph of a function? (A)<br/><br/>                 What happens to a function as the domain gets infinitely large or small? (A)</p> |
|---|--|---|

|   |   |  |
|---|---|--|
| <p><b>Vocabulary:</b><br/>                 relation, function, one-to-one, mapping, vertical-line test, domain, range</p> | <p><b>Vocabulary:</b><br/>                 domain, range, restrictions, discontinuous, asymptotic</p> | <p><b>Vocabulary:</b><br/>                 discontinuous, continuous, end-behavior, vertical and horizontal asymptotes, oblique asymptotes</p> |
|---|---|--|

Topic: Functions & Their Properties

Days: 8

Subject(s): Math

Grade(s): 11th, 12th

Topic: Graphs of Trigonometric Functions  
 Subject(s): Math

Days: 6  
 Grade(s): 12th

**Key Learning:** The graphs of all trigonometric functions share certain essential and useful characteristics.

**Unit Essential Question(s):** What are the characteristics of the graphs of trigonometric functions and how do they apply to real-world situations?

|   |   |  |
|---|---|--|
| <p>Concept:<br/><b>Sinusoids</b></p> <p>CC.2.2.HS.C.8</p> | <p>Concept:<br/><b>Transformations</b></p> <p>CC.2.2.HS.C.8</p> | <p>Concept:<br/><b>Applications</b></p> <p>CC.2.2.HS.C.8</p> |
|---|---|--|

|  |   |   |
|--|---|---|
| <p><b>Lesson Essential Question(s):</b><br/>                 What are the characteristics of sinusoidal graphs and how are they related to each function? (ET)</p> | <p><b>Lesson Essential Question(s):</b><br/>                 How do changes in the various fundamental characteristics (i.e. period, amplitude, phase displacement, etc.) affect the graph of a trigonometric function? (A)</p> | <p><b>Lesson Essential Question(s):</b><br/>                 What are the characteristics of sinusoidal graphs and how are they related to each function? (A)<br/><br/>                 How can sinusoidal graphs be used to study sound and harmonic motion? (A)</p> |
|--|---|---|

|   |                           |                           |
|---|---------------------------|---------------------------|
| <p><b>Vocabulary:</b><br/>                 amplitude, frequency, period, phase displacement, periodic</p> | <p><b>Vocabulary:</b></p> | <p><b>Vocabulary:</b></p> |

Topic: Laws of Sines & Cosines

Days: 5

Subject(s): Math

Grade(s): 12th

**Key Learning:** The laws of sines and cosines can be used to "solve" a variety of triangles.

**Unit Essential Question(s):** How do we find the lengths and measures of a triangle that does not contain a right angle?

|  |  |  |
|--|--|--|
| <p><b>Concept:</b><br/>Law of Sines</p> <p>CC.2.2.HS.C.9</p> | <p><b>Concept:</b><br/>Law of Cosines</p> <p>CC.2.2.HS.C.9</p> | <p><b>Concept:</b><br/>Area</p> <p>CC.2.2.HS.C.9</p> |
|--|--|--|

|   |  |   |
|---|--|---|
| <p><b>Lesson Essential Question(s):</b><br/>What is the Law of Sines and how may it be used to "solve" a triangle? (A)</p> <p>What is the ambiguous case of the Law of Sines? (A)</p> | <p><b>Lesson Essential Question(s):</b><br/>When is the Law of Cosines appropriate and how can it be used to find the lengths and/or measures of a triangle? (A)</p> | <p><b>Lesson Essential Question(s):</b><br/>How can the Laws of Sines and Cosines be used to find the area of a triangle? (A)</p> |
|---|--|---|

|                           |                           |   |
|---------------------------|---------------------------|---|
| <p><b>Vocabulary:</b></p> | <p><b>Vocabulary:</b></p> | <p><b>Vocabulary:</b><br/>Heron's Formula, Heron's, Formula</p> |
|---------------------------|---------------------------|---|

**Additional Information:**  
Worksheet: Law of Cosines Algebra Review

**Attached Document(s):**

Topic: Logarithmic Functions

Days: 7

Subject(s): Math

Grade(s): 12th

**Key Learning:** Logarithmic functions have many useful applications and are closely related to exponential functions.

Unit Essential Question(s):  
**What are the properties and applications of logarithmic functions?**

|  |  |  |
|--|--|--|
| <p>Concept:<br/><b>Properties</b></p> <p>CC.2.2.HS.C.1</p> | <p>Concept:<br/><b>Graphs</b></p> <p>CC.2.2.HS.C.2</p> | <p>Concept:<br/><b>Applications</b></p> <p>CC.2.2.HS.C.5</p> |
|--|--|--|

|   |  |   |
|---|--|---|
| <p>Lesson Essential Question(s):<br/>What are the basic characteristics of logarithmic functions? (A)</p> | <p>Lesson Essential Question(s):<br/>What is the relationship between the equation of a logarithmic function and its graph? (A)<br/><br/>What is the relationship between the equation of a logarithmic function and its graph? (ET)</p> | <p>Lesson Essential Question(s):<br/>How can logarithmic functions be used to model various situations? (A)</p> |
|---|--|---|

|  |                    |                    |
|--|--------------------|--------------------|
| <p>Vocabulary:<br/>common logarithms, natural logarithms</p> | <p>Vocabulary:</p> | <p>Vocabulary:</p> |
|--|--------------------|--------------------|

Concept:  
**Solutions**

CC.2.2.HS.C.5

Lesson Essential Question(s):  
How can the properties of algebra be used to simplify and solve logarithmic expressions? (A)  
  
How can the properties of algebra be used to simplify and solve logarithmic expressions? (A)  
  
How can logarithmic equations be solved using the properties of exponents? (A)  
  
How can logarithmic equations be solved using the properties of exponents? (ET)

Vocabulary:

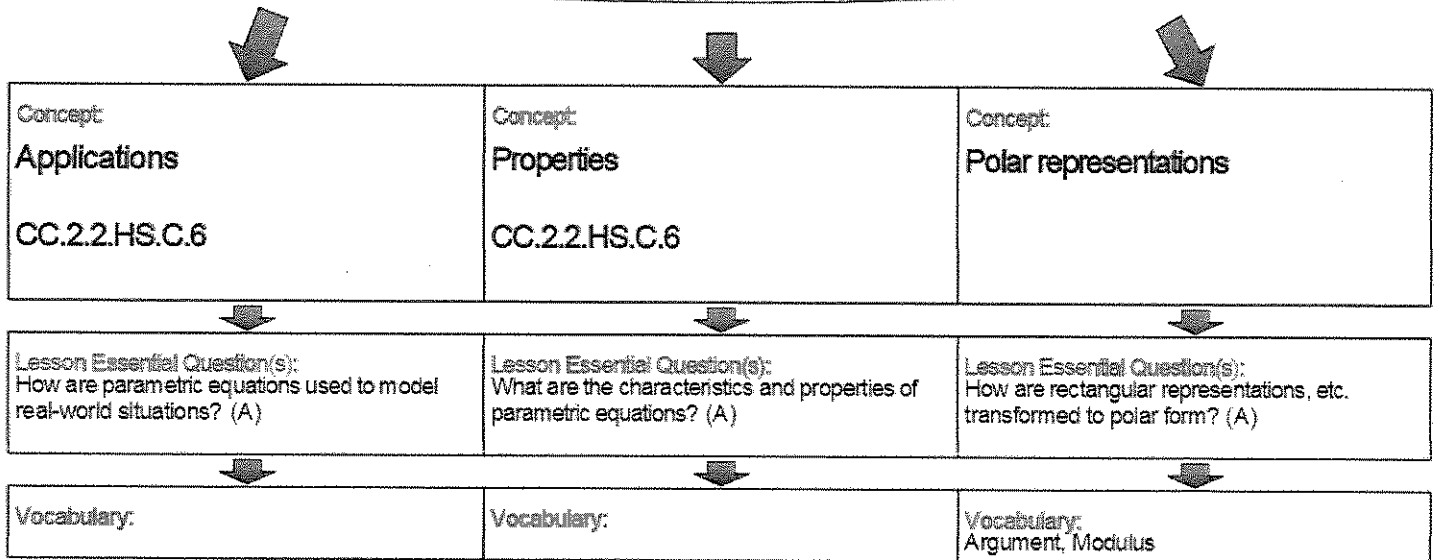

Topic: Parametrics and Polar Equations  
 Subject(s): Math

Days: 6  
 Grade(s): 12th

**Key Learning:** The height and distance traveled by an object can be determined by the amount of time that has elapsed since it was launched.

**Unit Essential Question(s):** How can the height and distance of a projectile be calculated?

**Additional Information:**  
 Worksheets:  
 Normal and polar forms of linear equations  
 Polar form representations of complex numbers

**Attached Document(s):**

Topic: Polynomial Functions & Rational Functions

Days: 8

Subject(s): Math

Grade(s): 11th, 12th

**Key Learning:** The properties of polynomial and rational functions are instrumental in understanding the characteristics of higher-order functions.

Unit Essential Question(s):  
**What are the essential characteristics and applications of polynomial and rational functions?**

|   |   |   |
|---|---|---|
| <p><b>Concept:</b><br/><b>Zeros &amp; Roots</b><br/><small>CC.2.2.HSD.4</small></p>   | <p><b>Concept:</b><br/><b>Complex Numbers</b><br/><small>CC.2.1.HSF.6</small></p>   | <p><b>Concept:</b><br/><b>Graphs</b><br/><small>CC.2.2.HSD.4</small></p>  |
| <p><b>Lesson Essential Question(s):</b><br/>What means can be used to locate the zeros and roots of polynomial and rational functions? (A)<br/><br/>What is the significance of the roots to a polynomial or rational function? (A)</p> | <p><b>Lesson Essential Question(s):</b><br/>How do we perform basic operations with complex numbers? (A)<br/><br/>What are the methods for finding complex roots to a polynomial? (A)</p> | <p><b>Lesson Essential Question(s):</b><br/>What is the relationship between the equation of a polynomial/rational function and its graph? (ET)</p> |
| <p><b>Vocabulary:</b><br/>zeros, roots, intercepts, solutions, multiplicity, complex roots, real roots, rational roots, rational root theorem</p>   | <p><b>Vocabulary:</b><br/>conjugate, complex numbers, imaginary numbers</p>   | <p><b>Vocabulary:</b><br/>asymptotes and holes, types of discontinuity</p>  |

Topic: Sequences and Series

Days: 6

Subject(s):

Grade(s):

Key Learning:

Many patterns of real-life data can be modeled by sequences and series. The inferences made from the recursive patterns of series can be mathematically verified.

Unit Essential Question(s):

How can the pattern of a sequence or series be algebraically represented?

How can pattern analysis be used to expand a binomial?

|   |   |  |
|---|---|--|
| <p>Concept:<br/><b>Arithmetic sequences and series</b><br/><br/>CC.2.2.HS.C.3</p> | <p>Concept:<br/><b>Geometric sequences and series: finite and infinite</b><br/><br/>CC.2.2.HS.C.3</p> | <p>Concept:<br/><b>Binomial theorem</b><br/><br/>CC.2.2.HS.C.3</p> |
|---|---|--|

|   |  |  |
|---|--|--|
